

## *Model 60W Roller Hold-Down*

Techno's roller hold-down system is designed to work on Techno Premium Class CNC router models. It is ideal for rough plywood or stacked sheet materials when the conventional vacuum hold-down is not practical enough to do the job. Now two and three sheets of material can be processed allowing an even shorter manufacturing cycle time. The twin roller positions applies maximum downward force to the material, preventing part slippage.

### **FEATURES**

- (4) 2" diameter urethane covered steel rollers
- Automated sensors lift and retract rollers before outer edge of work piece
- 3" roller clearance for easy loading and unloading of materials
- Manual controls to adjust for various sheet lengths
- Works well with warped materials
- Protective roller guards
- Provides part hold-down for Ž 13"
